

# SNAPDRAGON RIDE™ FLEX SoC

Snapdragon Ride Flex enables mixed-criticality workloads like infotainment and ADAS to run seamlessly on a single SOC supported by hardware/software co-design.

## SCALABILITY WITH A UNIFIED SOFTWARE FRAMEWORK

Central compute and software defined vehicle-ready architecture with connected services APIs

# Snapdragon Ride Flex SoC value proposition

One software baseline

One set of PMIC, boot memory and DRAM

Smaller PCB with simpler stack-up

Significant cost benefit

Ideal for centralized compute and software-defined vehicle architectures
