

3GPP Release 17: Completing the first phase of the 5G evolution

To bring new system capabilities and expand 5G
to new devices, applications, and deployment

5G Accelerating Globally

205+

Operators with
5G commercially
deployed

280+

Additional
operators
investing in 5G

750M+

5G smartphones
to ship in 2022

1B+

5G connections
by 2023 – 2 years
faster than 4G

5B+

5G smartphones
to ship between
2020 and 2025

1275+

5G designs
launched or in
development

Driving the 5G technology evolution in the new decade

Rel-15 eMBB focus

- 5G NR foundation
- Sub-7 and mmWave
- Scalable & forward compatible
- Basic URLLC support
- mMTC via eMTC & NB-IoT

Rel-16 industry expansion

- Unlicensed spectrum (NR-U)
- Enhanced URLLC
- New functionalities: Sidelink (NR V2X), Positioning
- 5G broadcast
- eMTC/NB-IoT with 5G core
- Topology: IAB
- eMBB enh: MIMO, device power, CA/DC, mobility

Rel-17 continued expansion

- mmWave extended to 71GHz
- Lower complexity "NR-Light" (RedCap)
- Non-terrestrial communication (satellites): NR NTN and NTN IoT
- Improved IIoT, positioning, V2X
- Enhanced IAB, RF repeaters

Rel-18+ 5G-Advanced

- Next set of 5G releases (i.e., 18, 19, 20, ...)
- Rel-18 scope decided in Dec '21
- Rel-18 study/work to start in Q2-2022

1. 3GPP start date indicates approval of study package (study item->work item->specifications), previous release continues beyond start of next release with functional freezes and ASN.1

Enhancing mobile broadband

5G Advanced in Release 18+

5G Release 17: strengthened foundations and verticals

Enabling new verticals

Device enhancements

Non-terrestrial networks (NTN)

Automotive

Reduced capability devices (NR-Light)

5G Release 16: expanding to new verticals

High-precision positioning

Sidelink

Advanced power saving and mobility

Mission-critical design

Topology expansion

5G Release 15: foundations of 5G

mmWave expansion

Unlicensed spectrum

Scalable numerology

Advanced channel coding

Massive MIMO

Flexible slot-based framework

Mobile mmWave

New deployment models

Industrial IoT

4G foundations

Our innovations expand the foundation of 5G

Foundational Qualcomm innovations lead 3GPP Releases 15,16 and 17

Qualcomm innovation leadership in 3GPP Release 17

mmWave expansion

For more capacity, new use cases and deployments

Licensed and unlicensed spectrum operations in 52.6-71 GHz

Reduced capability devices (NR-Light)

For expanded IoT: wearables, sensors, surveillance cameras

Lower complexity devices with 20 / 100 MHz max bandwidth in sub-7 / mmWave with 1 or 2 Rx antennas

Device enhancements

For enhanced device user experience and performance

More antennas, higher throughput, battery life, mobility, coverage, positioning accuracy, multi-SIM

Non-terrestrial networks (NTN)

For ubiquitous coverage and expanded use cases

Satellite communications for mobile devices and IoT, leveraging 5G NR framework

Topology expansion

For more efficient deployments, public safety, and others

Enhanced IAB, repeater, C-V2X with vulnerable road users

Early R&D investments

Cutting-edge prototypes

Fundamental contributions to 3GPP

3GPP Release 17

A key 5G milestone: 3GPP Release 17 Completion

Functional freeze in March 2022 and
ASN.1 freeze expected in June 2022

New and enhanced 5G system capabilities

Further enhanced massive MIMO

Coverage enhancements

Device power savings

Spectrum expansion (60 GHz)

Enhanced IAB and RF repeater

Further enhanced URLLC, private networks, others...

Expansion to new 5G devices and applications

Sidelink expansion

Broadcast/multicast expansion

NR-Light (RedCap), enhanced mIoT

Non-terrestrial networks (NTN)

Enhanced precise positioning

Boundless XR study, others...

Strengthen the end-to-end 5G system foundation

Further enhancing 5G mobile broadband and expanded use cases

Focus areas for Release 17 Work Item

Further enhancing 5G massive MIMO performance

Enhanced multi-beam operation

- Unified TCI¹ framework in DL/UL² to reduce latency and overhead
- UL beam selection for multi-panel devices
- More efficient L1/L2³ intra-and inter-cell mobility

SRS⁷ improvements

- More flexible triggering of aperiodic SRS and DCI⁸ overhead reduction
- SRS switching for up to 8 antennas
- Improved SRS reliability such as repetitions and time bundling

Enhanced multi-TRP⁴ deployment

- Improved reliability for DL control, UL control and data channels
- QCL⁵ for inter-cell multi-TRP reusing L1/L2 mobility measurements
- Beam management for multi-panel Rx
- High-speed SFN⁶ enhancements

CSI⁹ measurement & reporting

- DL/UL reciprocity of angle and delay for FDD¹⁰
- More dynamic channel/interference hypotheses for non-coherent joint transmission

Source: RP-212535 (Further enhancements on MIMO for NR)

1 Transmission Configuration Indicator; 2 Downlink/Uplink; 3 Layer-1/Layer-2;

4 Transmission and Reception Points; 5 Quasi Co-Location;

6 Single Frequency Network; 7 Sounding Reference Signal;

8 Downlink Control Information; 9 Channel State Information;

10 Frequency Division Duplex

Improving 5G uplink coverage

Targeting urban and rural deployments using sub-7 GHz and mmWave, also applies to satellites (NTN¹) communication

Coverage enhancements Work Item 3GPP Release 17

Source: in RP-211566 (NR coverage enhancements)

1 Non-terrestrial Network; 2 Physical Uplink Shared Channel;
3 Physical Uplink Control Channel; 4 Demodulation Reference Signal

- **Uplink data channel (PUSCH²) enhancements**
Increasing the maximum numbers of repetitions, supporting transport block processing over multiple slots, and enabling joint channel estimation across multiple transmissions and frequency hopping
- **Uplink control channel (PUCCH³) enhancements**
Supporting dynamic repetitions for better reliability, DMRS⁴ bundling across repetitions based on similar mechanisms for enabling joint channel estimation for PUSCH
- **Message 3 enhancements**
Supporting Type A PUSCH repetitions for capability signaling, barring, and early indication

Further enhancing device power efficiency

For idle/inactive mode

Techniques to reduce unnecessary device paging reception (false alarms) without impacting legacy devices

Providing potential TRS¹/CSI-RS² to devices in idle/inactive mode with minimized system overhead impact

Supporting PDCCH³-based permanent equipment identifier (PEI)

Rel-17 power saving enhancements

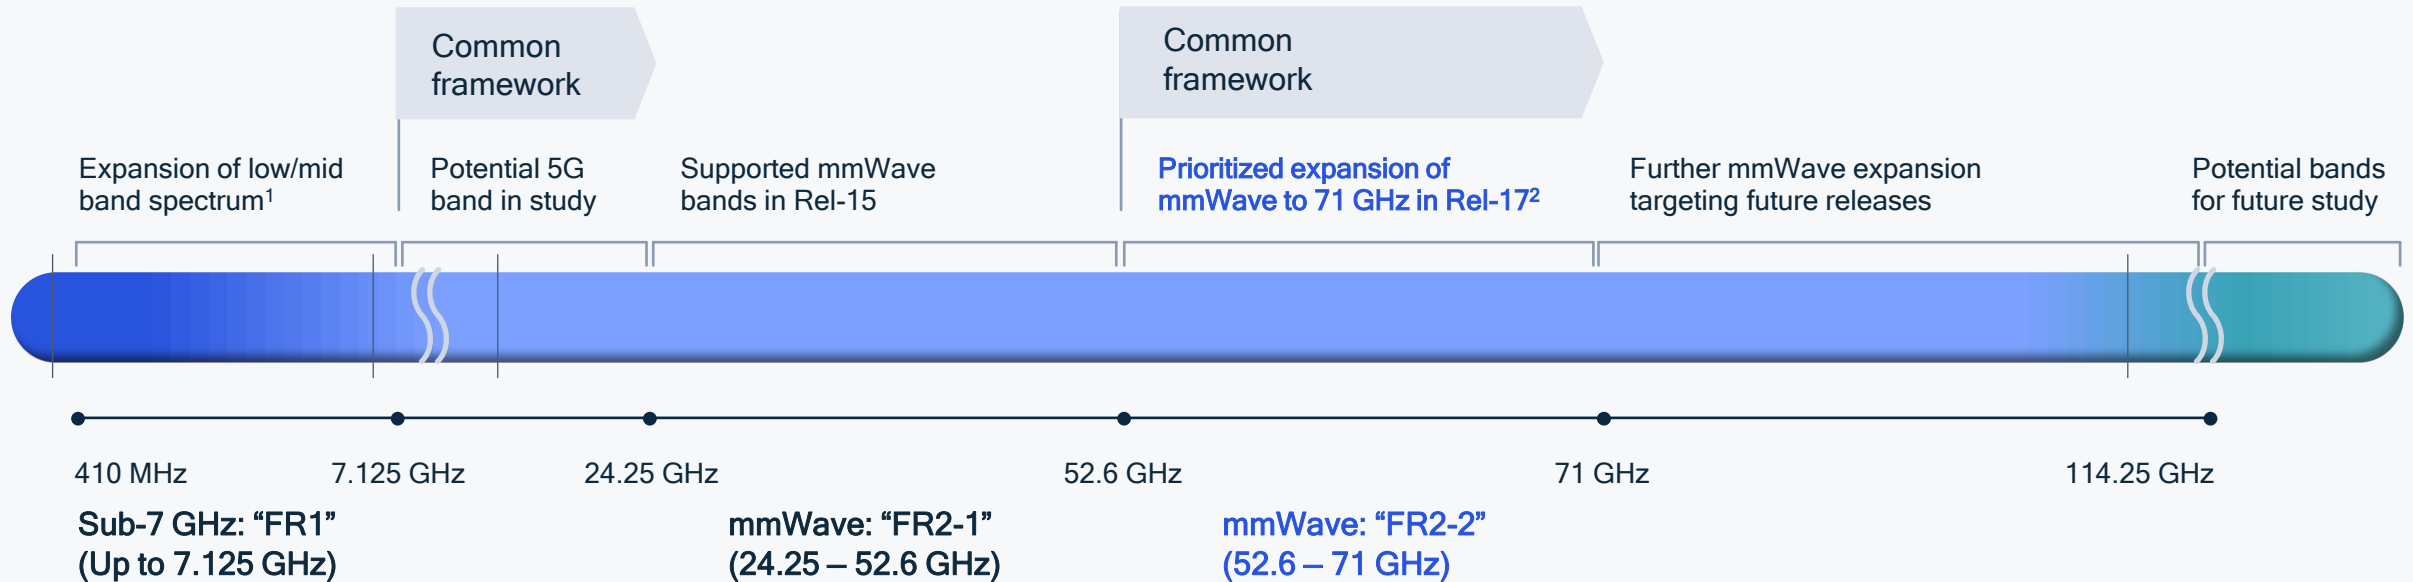

Building on Rel-16 device power saving design

For connected mode

Extending to Rel-16 DCI⁴-based power saving adaptation for an active BWP⁵, including PDCCH monitoring skipping during C-DRX⁶

Relaxing device measurement for RLM⁷ and/or BFD⁸ for low mobility devices with short DRX⁹ cycle

Scaling 5G NR design to support 60 GHz unlicensed band

Design Principles

SCS³ for control/data channels

Leveraging existing design of 120 kHz, and scaling to wider numerology of 480 kHz and 960 kHz

SSB⁴ numerology

Supporting 120 kHz (480 kHz optional) for initial access, 120 kHz (480 kHz, 960 kHz optional) for non-initial access, and 64 SSB beams

Channel access mechanisms

Supporting flexible deployment in unlicensed spectrum utilizing LBT⁵, directional LBT, or no LBT

Beam management

Reusing designs based on existing mmWave frequency range (FR2-1) established in Release 15 and 16

1. Rel-15 supported 450 MHz to 6 GHz; 2 To support global unlicensed 60 GHz bands, SCS scaling from 24.25-52.6 GHz band with same characteristics (e.g., waveforms); 3 Subcarrier Spacing; 4 Synchronization Signals Block; 5 Listen-Before-Talk

Further enhancing ultra-reliable, low-latency communications

Release 17 Work Item targeting to meet more stringent requirements of Industry 4.0 applications

Enhanced physical layer feedback

- Improved device feedback for HARQ-ACK¹
- New mechanism triggered aperiodic CSI² and SRS³ for more accurate MCS⁴ selection
- Improved reliability with uplink control⁵ on two carriers
- Subband CQI⁶ with more granularity

Improved compatibility for unlicensed spectrum

- Supporting device-initiated COT⁷ for FBE⁸
- Harmonizing uplink configured-grant enhancements in Rel-16 NR-U⁹ and URLLC¹⁰ to be applicable for unlicensed spectrum

Intra-device multiplexing and prioritization

- Handling low-priority traffic on eMBB without impacting data flow in case of URLLC concurrency
- Parallel PUCCH and PUSCH¹¹ transmissions on different component carriers for inter-band CA¹²

Enhanced time synchronization

Supporting uplink RTT¹³-based method for TSN¹⁴ and improved propagation delay compensation

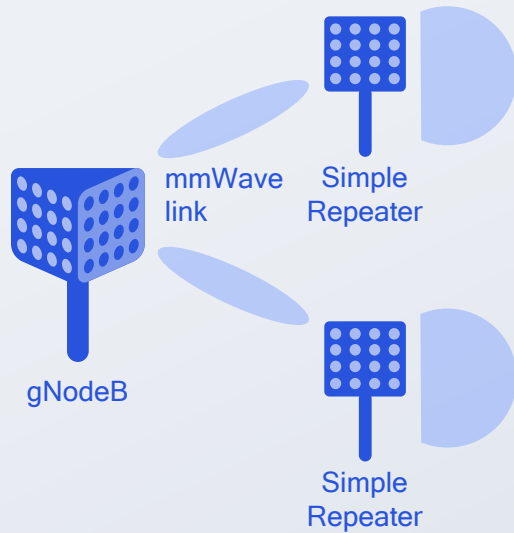

Network enhancements

Based on new QoS¹⁵ related parameters such as survival time, burst spread

Source: RP-210854 (Enhanced Industrial Internet of Things and ultra-reliable and low latency communication support for NR)

1 Hybrid Automatic Repeat Request Acknowledge; 2 Channel State Information; 3 Sounding Reference Signal; 4 Modulation and Coding Scheme; 5 PUCCH - Physical Uplink Control Channel; 6 Channel Quality Indicator; 7 Channel Occupancy Time; 8 Frame Based Equipment; 9 NR Unlicensed; 10 Ultra Reliable Low Latency Communication; 11 Physical Uplink Shared Channel; 12 Carrier Aggregation; 13 Round Trip Time; 14 Time Sensitive Networking; 15 Quality of Service

RF Repeaters

Introduced RF repeaters (without adaptive beamforming) that can operate in sub-7 GHz (FDD/TDD) and mmWave, leveraging IAB and LTE repeaters work; “Smart” network-controlled repeater in Rel-18

Integrated Access & Backhaul (IAB)

Enhanced Rel-16 IAB design by adding support for simultaneous Tx and Rx (spatially separated full duplex), inter-donor migration / handover, and multi-hop efficiency enhancements

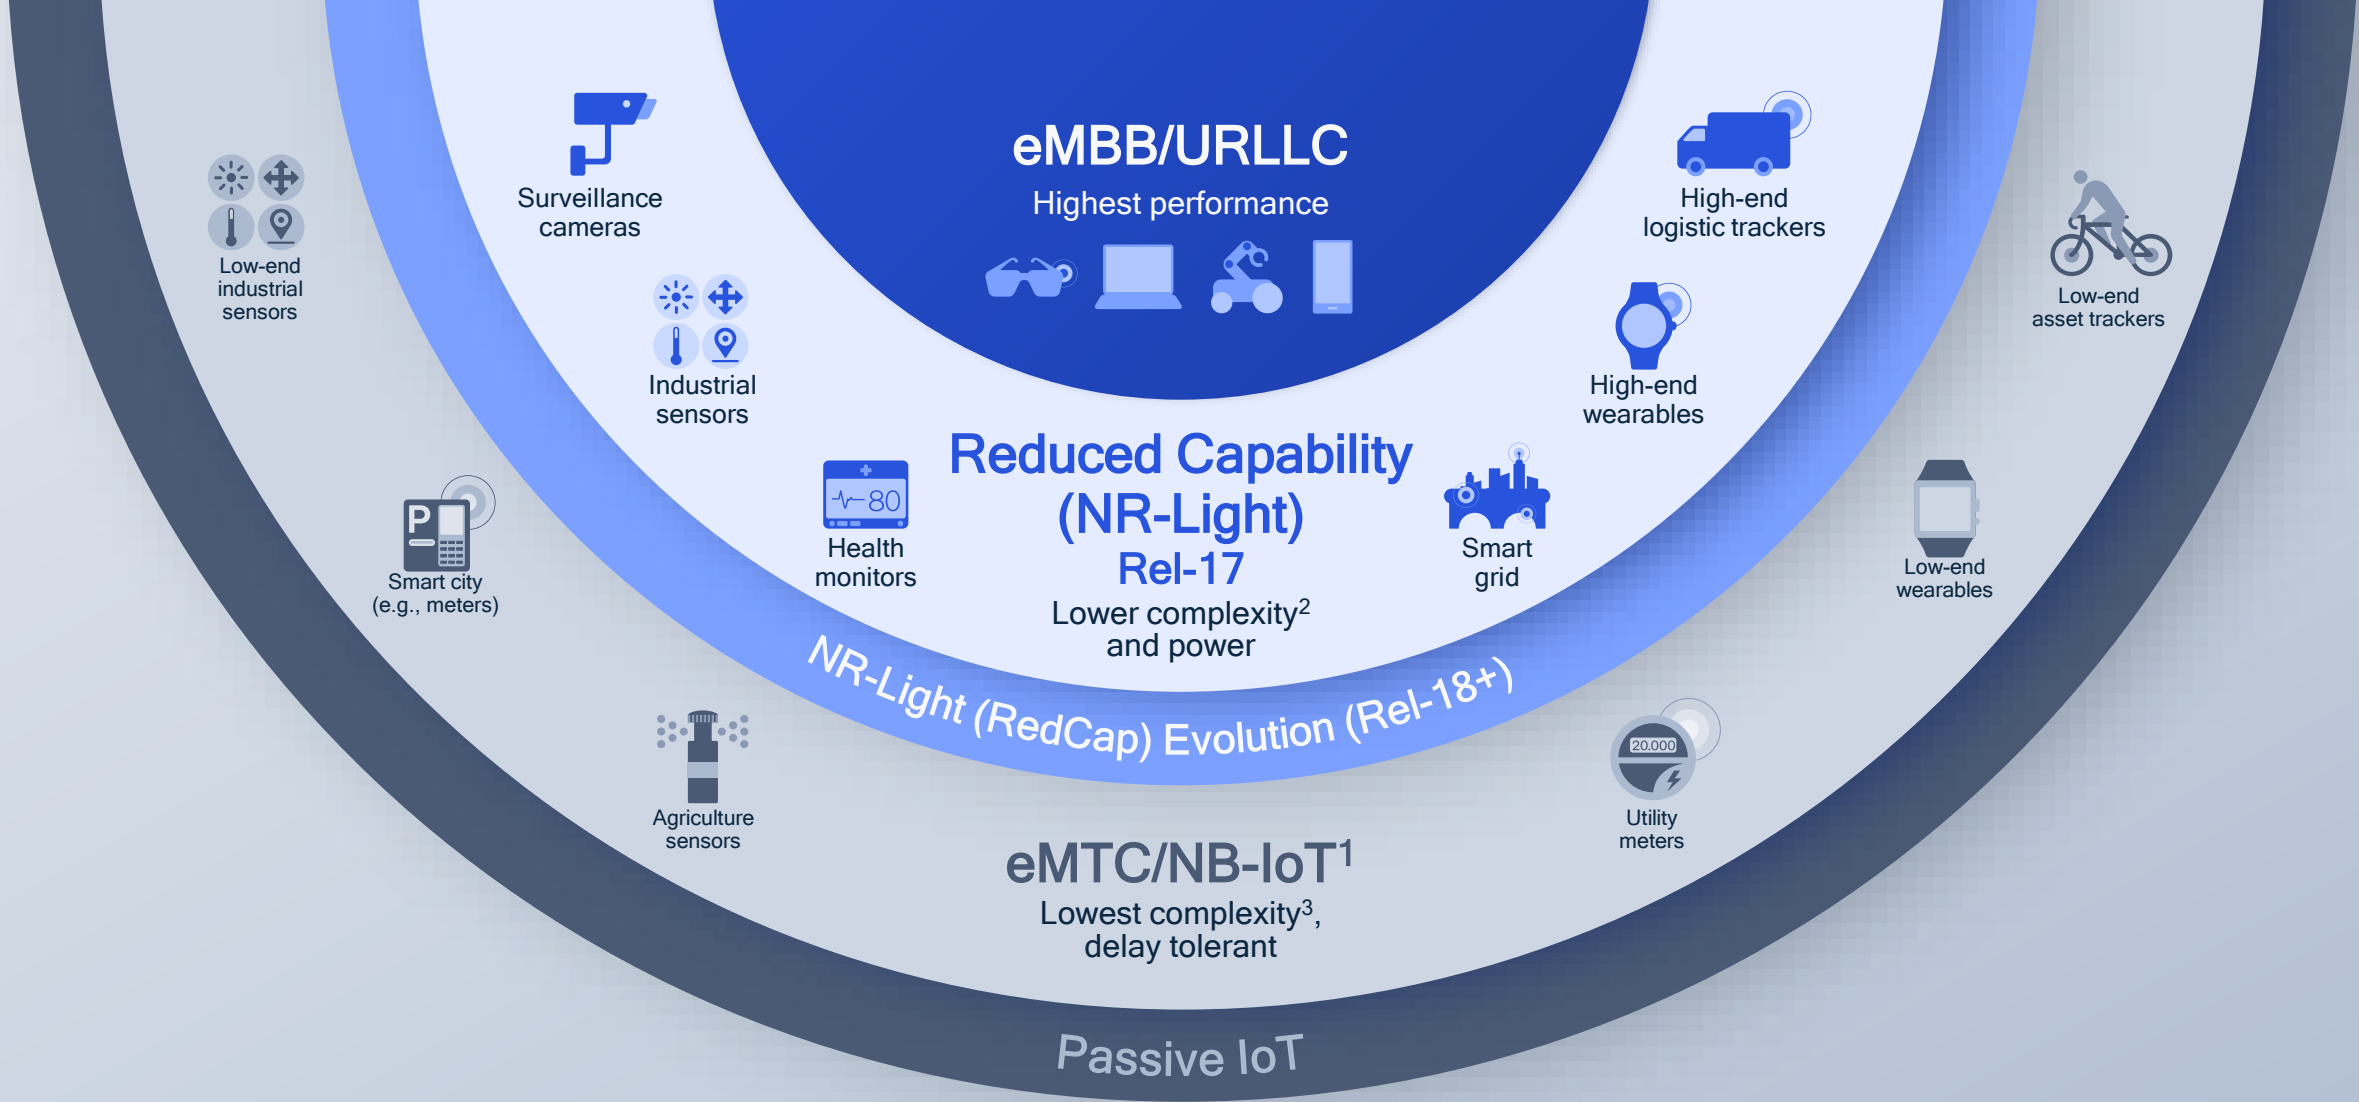

Efficiently expand 5G mmWave coverage

New mmWave infrastructure options introduced as part of Release 17

Proliferate 5G to virtually all devices and use cases

Continued expansion
to new device types
and tiers – fulfilling
the 5G vision

5G NR: A unified, scalable air interface allowing coexistence of a wide range of 5G device classes

¹ Also including satellite access; ² Data rate of 150 Mbps DL / 50 Mbps UL, latency of 10-30 ms, 10-3 to 10-5 reliability, coverage MCL of 143 dB; ³ Data rate of 1Mbps, MCL of 155.7 dB (eMTC) and 164 dB (NB-IoT)

5G NR Technology Foundation

Lower device
complexity

Coverage
optimization

Reduced power
consumption

Increased network
efficiency

Reduced Capability (NR-Light) Release 17

Narrower bandwidths

(20 MHz in sub-7, 100 MHz in mmWave)

Fewer receive antennas

(1 or 2 Rx)

Half duplex

Lower transmit power

Enhanced power saving modes

Limited mobility and handovers

Repetition and bundling

Lower order modulation

(256-QAM optional)

Sidelink or relays

Reduced signaling overhead

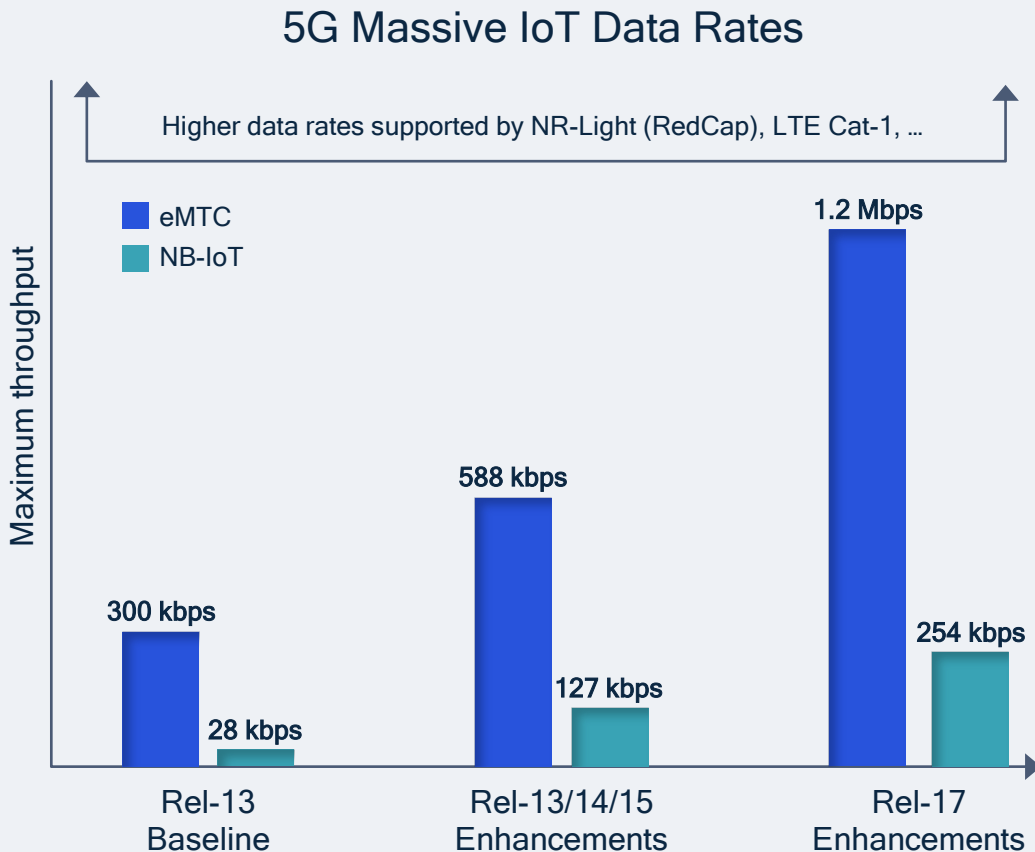

Simplified core network

Better resource management

Scaling down 5G NR for lower complexity IoT devices

Continued 5G massive IoT evolution with eMTC/NB-IoT

Release 17 Work Item enhancements

Source: RP-211340 (Additional enhancements for NB-IoT and LTE-MTC)

1 Transport Block Size; 2 Hybrid Automatic Repeat Request; 3 Frequency Division Duplex;
4 Physical Uplink Shared Channel; 5 Physical Resource Block; 6 Radio Link Failure

eMTC enhancements

Supporting larger TBS¹ sizes and 14 HARQ² processes to increase data rate for half-duplex FDD³ devices

Supporting power boosting for devices with PUSCH⁴ sub-PRB⁵ resource allocation

Adding an optional device capability to support a maximum DL TBS of 1,736 bits for half-duplex FDD devices

NB-IoT enhancements

Supporting 16-QAM for UL and DL unicast, increasing in maximum TBS sizes for DL compared to Rel-16 NB-IoT and extended channel quality reporting

Reducing the time taken to recover from RLF⁶, with new signaling for neighbor cell measurements and triggering

Introducing carrier selection based on coverage level and associated carrier specific configurations

5G NR for NTN

Complementing terrestrial networks
in underserved areas

Supporting satellites backhaul communication for CPEs and direct link to handhelds (e.g., smartphones) for low data rate services

Utilizing sub-7 GHz S-band with additional bands added in the future (e.g., 10+ GHz in Rel-18 proposed)

5G IoT for NTN

Expanding addressable market
for the 5G massive IoT

Supporting diverse use cases, including transportation, utilities (e.g., solar, oil/gas), farming, mining, environmental monitoring

Utilizing sub-7 GHz band for both eMTC and NB-IoT, with LTE EPC¹ only in standalone network

Release 17 establishes 5G NR support for satellites communication

Release 17 Work Item expands sidelink to new use cases

Release 17 Sidelink Enhancements

For public safety, IoT, commercial use cases and beyond

Updated sidelink evaluation methodology

Reusing existing evaluation assumption and performance metric¹, based on feedback from car manufacturers

Improved resource allocation

Reducing device latency, power consumption, and improving reliability (e.g., half duplex, collision detection indication, control forwarding, inter-device coordination)

Power saving enhancements

Defining sidelink DRX for broadcast, groupcast, unicast, and power-efficient resource selection for devices

New sidelink frequency bands

Ensuring sidelink and network communication coexistence in the same and adjacent channels in licensed spectrum

Geographic confinement

Limiting sidelink operations to be within a predetermined area for a given frequency range in non-ITS² bands

Sidelink relay

L2/L3 device to network relay for coverage extension, Follow-up work Item for device-to-device relay in scope for Release 18

5G positioning evolution

5G Advanced

Release 16

Establishing foundation

Achieving accuracy of 3m/10m (indoor/outdoor) for 80% of time

Supporting RTT¹, AoA/AoD², TDOA³, single-cell positioning

Including new evaluation scenarios, i.e., industrial IoT

Release 17

Enhancing capability and performance for a wide range of use cases⁴

Centimeter-level accuracy

Meeting accuracy requirements for commercial use cases (<1m) and IIoT (<0.2m within 100ms)

- Mitigating device and base station Rx/Tx timing delays
- Improving accuracy for UL AoA and DL-AoD positioning
- Enhancing information reporting for multipath & NLOS⁵ mitigation

Reduced positioning latency

Optimizing positioning latency to as low as 10ms, related to the request / response of location, device measurement time and gaps

Improved efficiency

Scaling to higher capacity by supporting device positioning in inactive state and on-demand PRS⁶, triggered by network or device

GNSS⁷ enhancements

Improve the performance and efficiency for 5G positioning with assistance information from GNSS, supporting GNSS positioning integrity determination, BeiDou positioning signals (BDS B2a and B3I), and NavIC⁸ for 5G NR

5G positioning evolution in Release 18+

Improving performance, expanding to new devices and deployments

Pushing forward with the 5G positioning technologies

Source: RP-210903 (NR Positioning Enhancements); RP-201518 (Positioning use cases for V2X & PubS)

1 Roundtrip Time; 2 Angle of Arrival, Angle of Departure; 3 Time Difference of Arrival; 4 Including a Study for sidelink positioning for V2X and public safety; 5 Non-line-of-sight; 6 Positioning Reference Signal; 7 Global Navigation Satellite System; 8 Indian Regional Navigation Satellite System

Optimizing 5G NR for Boundless XR experiences

Release 17 Study Item for XR over 5G NR –
Work Item in scope for Release 18

Use cases in scope

Distributed computing

Split rendering

Viewpoint dependent streaming

Conversational XR

Cloud gaming

Traffic requirement

Identifying requirements for use cases in scope, such as roundtrip time, one-way packet delay budget, and packet error rate, taking different upper layer assumptions into consideration

Evaluation methodology

Assessing XR (including VR, AR) and cloud gaming performance along with identification of KPIs for relevant deployment scenarios

Performance evaluation

Carrying out characterization of XR system performance based on agreed upon evaluation methodologies

UHF¹ broadcast frequencies

Adding support for 6/7/8 MHz carrier bandwidths² to support UHF bands

CMAF³-based streaming ecosystem

Targeting low-latency broadcast distribution and 5G media streaming

Simultaneous broadcast + unicast

Optimizing modem resource usage and enabling fast broadcast service discovery

Multicast operation for 5G NR

Supporting group scheduling, mobility, DRX⁴, reception in idle and transparent SFN⁵

Broadcast and unicast dynamic switching

Enabling dynamic switching between unicast & broadcast (e.g., for public safety use cases)

Improved robustness and efficiency

Supporting uplink HARQ⁶ feedback and retransmissions for link adaptation and reliability

5G Standalone Broadcast (Rel-17)

5G Mixed-mode Multicast (Rel-17)

Continue to evolve the end-to-end design for 5G broadcast

Source: RP-211144 (New bands and bandwidth allocation for LTE based 5G terrestrial broadcast); RP-201038 (Revised Work Item on NR Multicast and Broadcast Services)

1 Ultra high frequency, i.e., 470 to 698 MHz; 2 In addition to currently support carrier bandwidths of 1.4MHz, 3MHz, 5MHz, 10MHz, 15MHz, 20MHz;

3 Common media application format; 4 Discontinued Reception; 5 Single Frequency Network; 6 Hybrid Automatic Repeat Request

DSS¹ enhancements

Enable PDCCH² cross-carrier scheduling from a SCell³ to a P(S)cell⁴ in sub-7 GHz

Enhanced multi-radio DC⁵

Support efficient activation/de-activation of one SCG⁶ and SCells, and conditional PSCell change/addition

Multi-SIM⁷

Support dual-standby, 1 active and 1 idle SIM, device-indicating network switch, and SIM from different MNOs⁸

Higher-order modulation

Support 1024-QAM for downlink and 256-QAM for sub-7 GHz uplink communication

Small data transmission

Allow uplink data in inactive mode (in either 2-step or 4-step RACH⁹) with defined small data request message

High-speed train

Optimize 5G support for high-speed trains for both sub-7 GHz and mmWave

Other RAN projects in 3GPP Release 17

Uplink data compression

Utilize LTE procedure as baseline for 5G NR Standalone mode only

Enhanced data collection

Add new data categories for SON/MDT¹⁰ (mobility, energy saving, capacity, coverage, ...), and for RAN AI (use cases, types of input/output)

RAN¹¹ slicing

Support slice-based cell reselection, RACH configuration, service continuity, enforcement of slice maximum bit rate

Enhanced private network

Access to standalone private networks using credentials from a different entity, IMS voice, emergency services.

Quality of experience

Enable measurement collection in Standalone mode with mobility continuity and per-slice support.

User-plane integrity protection

Strengthen 5G security with integrity protection for user-plane in addition to control-plane using 5G NR PDCP¹²

Source: RP-211345 (NR Dynamic spectrum sharing); RP-201040 (Further Multi-RAT Dual-Connectivity enhancements); RP-213679 (Multi-SIM?); RP-202886 (NR DL 1024-QAM); RP-212594 (NR small data transmissions in INACTIVE state); RP-210833/210800 (NR High Speed Train); RP-211203 (NR Uplink Data Compression); RP-212534 (Enhancement of RAN Slicing for NR); RP-213574 (Data collection for SON/MDT); RP-201620 (Enhancement for data collection for NR and ENDC); RP-211406 (NR QoE management and optimizations for diverse services); RP-212585 (Enhancement of Private Network Support); RP-213669 (UIPI support for EPC connected architectures)

1 Dynamic Spectrum Sharing; 2 Physical Downlink Control Channel; 3 Secondary Cell; 4 Primary/Secondary Cell; 5 Dual Connectivity; 6 Secondary Cell Group; 7 Subscriber Identity Module; 8 Mobile Network Operator; 9 Random Access Procedure; 10 Self Organizing Network, Minimization of Drive Test; 11 Radio Access Network; 12 Packet Data Convergence Protocol

How will
5G Advanced
bring us a step
closer to 6G?

Continued evolution towards 6G

Leading the 5G Advanced technology evolution on the path to 6G

Creating new value across applications

📍 5G Positioning

📶 Advanced MIMO

📶 Mobile mmWave

🌿 Green Networks

🏭 Industrial 5G Networks
Industrial Precise Positioning

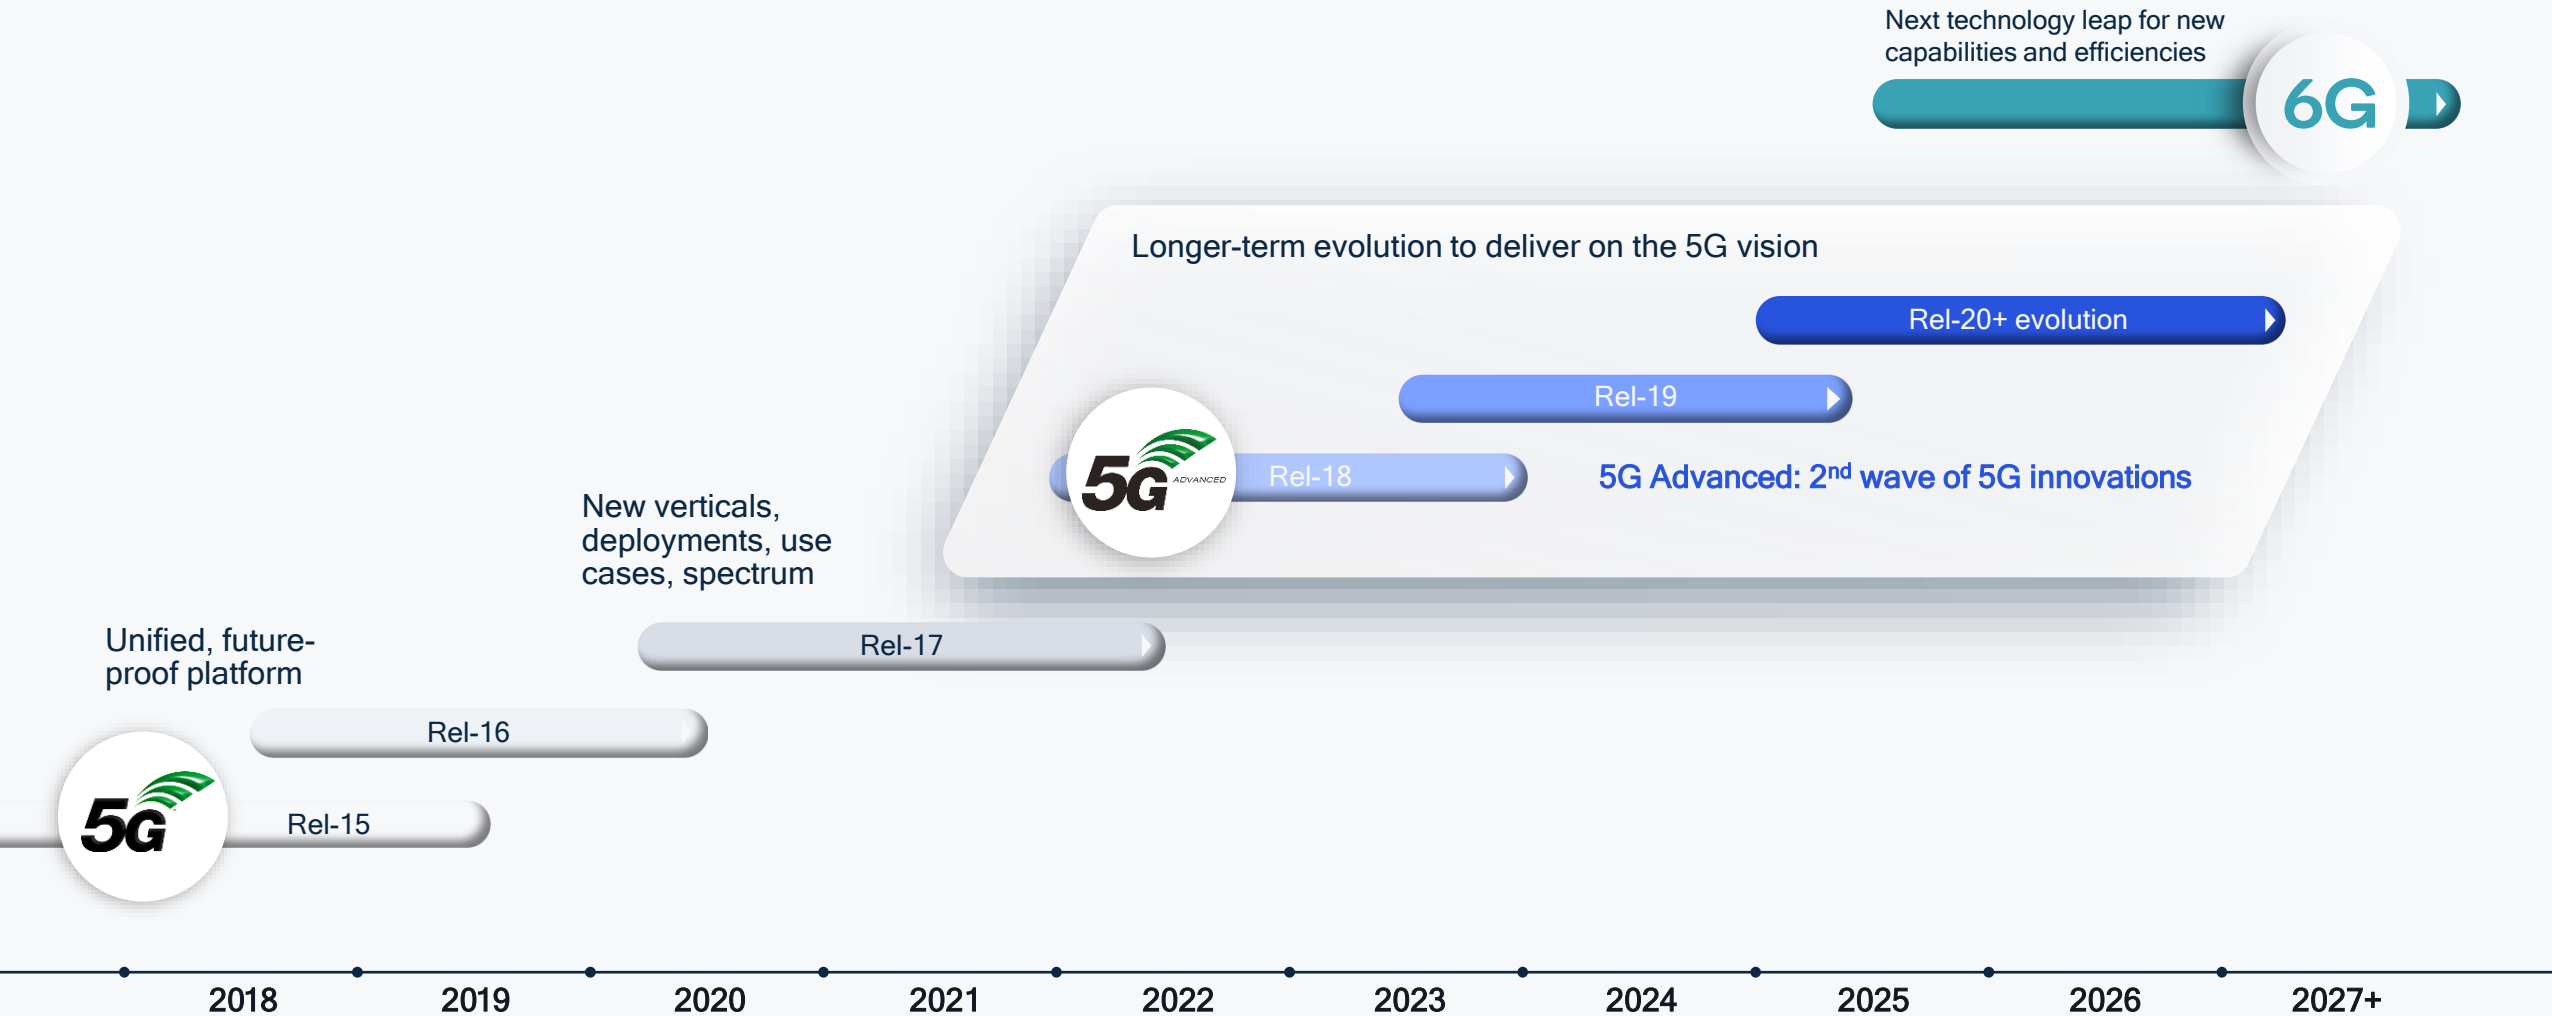

🧠 AI-enabled Air Interface

🚗 Automotive

🕶️ Enabling the Metaverse

📶 Wide-area IoT

Driving the 5G Advanced technology evolution in the new decade

Driving a balanced 5G evolution across key technology areas

Mobile broadband evolution vs. further vertical expansion

Deliver enhanced mobile broadband experiences and extend 5G's reach into new use cases

Immediate commercial needs vs. longer-term 5G vision

Drive new value in commercialization efforts and fully realize 5G's potential with future deployments

New and enhanced devices vs. network evolution

Focus on the end-to-end technology evolution of the 5G system to bring new levels of performance

Release 18 scope takes into consideration of the 5G Advanced evolution in Release 18, 19, and beyond (i.e., many Study Items defined to set up for Work Items in later releases)

Release 18

3GPP Release 18 sets off the 5G Advanced Evolution

Approved package has
a wide range of projects –
nominal work to start
in Q2 2022

Strengthen the end-to-end 5G system foundation

Advanced
DL/UL MIMO

Enhanced
mobility

Mobile IAB,
smart repeater

Evolved
duplexing

AI/ML data-driven
designs

Green
networks

Proliferate 5G to virtually all devices and use cases

Boundless
extended reality

NR-Light (RedCap)
evolution

Expanded
sidelink

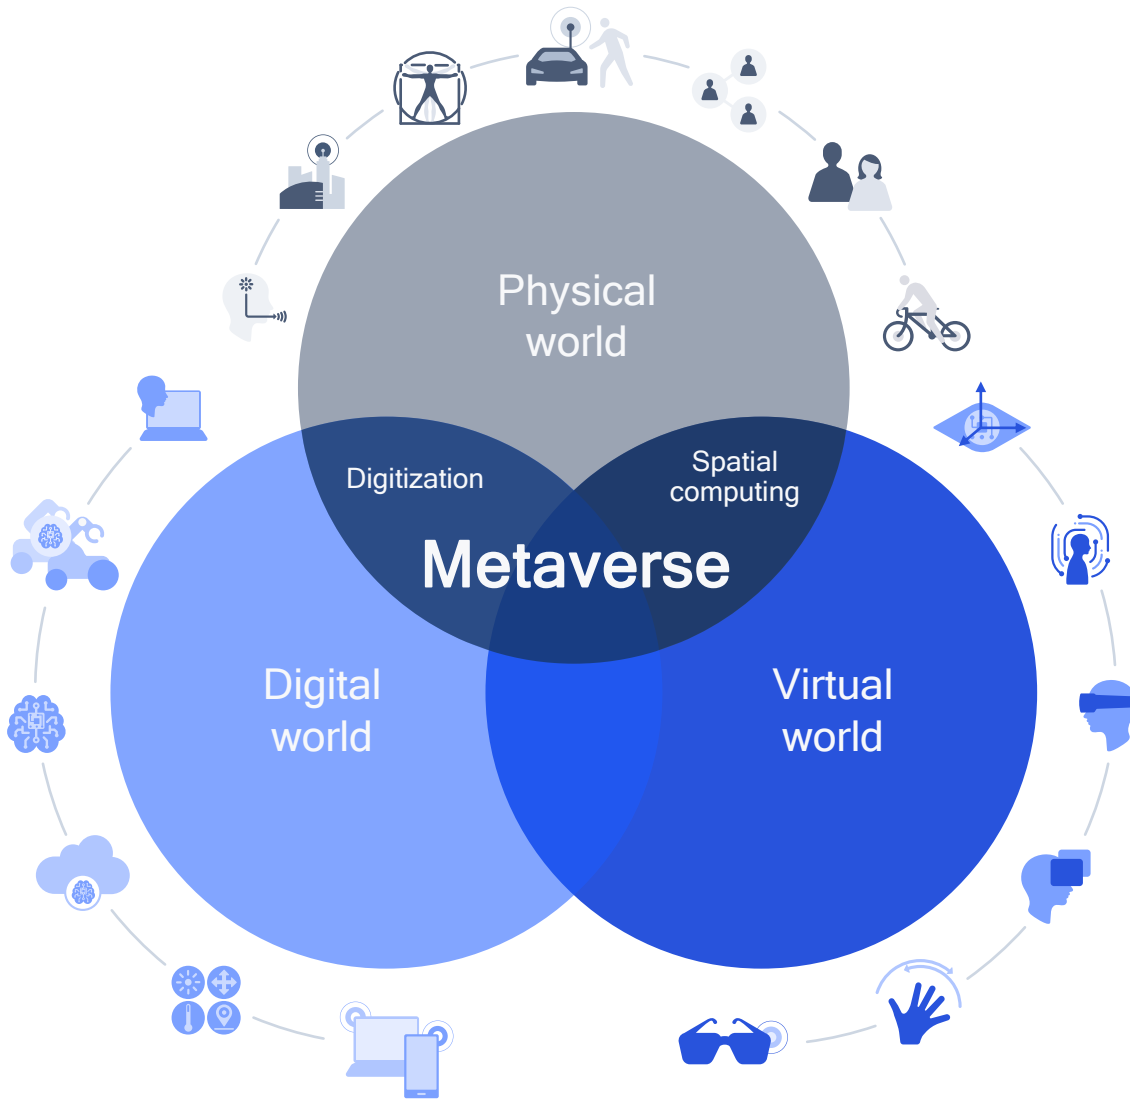

Expanded
positioning

Drones & expanded
satellites comm.

Multicast & other
enhancements

Ubiquitous, low-power sensing and monitoring with near real-time actions

Immersive interactions take human augmentation to the next level

New interface opportunities through

Merging worlds

The

New human interface

Key research vectors enabling the path towards 6G

AI/ML powered E2E communications

Data-driven communication and network design, with joint training, model sharing and distributed inference across networks and devices

Spectrum expansion & sharing

Expanding to THz, wide-area expansion to higher bands, new spectrum sharing paradigm, dynamic coordination with environmental awareness

New radio designs

Evolution of duplexing schemes, Giga-MIMO, mmWave evolution, reconfigurable intelligent surfaces, non-terrestrial communications, waveform/coding for MHz to THz, system energy efficiency

Merging of worlds

Physical, digital, virtual, immersive interactions taking human augmentation to next level via ubiquitous, low-power joint communication and sensing

Scalable network architecture

Disaggregation and virtualization at the Connected Intelligent Edge, use of advanced topologies to address growing demand

Communications resiliency

Multifaceted trust and configurable security, post quantum security, robust networks tolerant to failures and attacks

Design goals & performance vectors

Capacity	Latency	Spectral efficiency	User experience	Ease of onboarding
Data rate	Reliability	Mobility Security	Scalability Intelligence	Cost efficiency
Coverage	Energy efficiency	Connection density	Positioning capability	And others...

Innovating to pave the path to 6G

A unified connectivity fabric for this decade

Next technology leap for new capabilities and efficiencies

Continued evolution

5G

Rel-15
eMBB focus

Rel-16 and 17 expanding
to new industries

5G ADVANCED

Rel-18, 19, 20 and beyond
Continued 5G proliferation

6G

Strong 5G momentum sets stage for global expansion

Historically 10 years between generations

Thank you
